

Project: gHRMPlus

Email Service

Basic Info

Google API is used to send email with software. To integrate Google API into software publishing follow the steps stated below.

Steps

- Use google workspace to create a Gmail API project. Then download the OAuth credentials (*Skip this step is you have credentials file*)
- Place the credentials file on **App_Data/google-credentials.json**
- From localhost go to the URL **/Home/GmailInit**
- This will generate folder **google-token.json**
- Copy this 2 file/Folder to publish location on server
- After publish open url **/Home/GmailInit**
- If Gmail API integration is successful, **success** message will be shown
- To test send and email go to this link
/Home/GMailTest?Subject=&Body=&To=&Key=test123send456

Gmail Account

- gHRMPlusEmailNotification@gmail.com
- Credential for this Google account is in the app **web.config** file
